

About MILES Electric Vehicles

MILES Electric Vehicles was founded in 2004 by entrepreneur/philanthropist Miles Rubin with a mission to rapidly deploy advanced all-electric vehicles that meet the needs of America's workforce and everyday drivers. Our goal is to prove that we can immediately reduce our nation's dependence on foreign oil with vehicles that produce zero tailpipe emissions.

The current MILES line includes all-electric low speed cars and trucks that are equipped with the most efficient US technology AC drivetrain components. These vehicles offer low operating costs – less than 2 cents per mile, while providing “best in class” performance to those wishing to enter the clean tech transport sector. Current MILES fleet customers encompass many of the nation's most prestigious universities including Stanford, Yale and UCLA. Government users include NASA, the US Navy, the National Park Service and both the Chicago Wastewater District and the Sacramento Municipal Utility District.

Join users who operate more than 1,000 MILES all-electric vehicles today and make your contribution to a healthier world.
